Product Range

MAC Stepframe Low Loaders have been designed with practicality in mind and engineered to a superb standard. The hauling capacity of MAC's Stepframe Low Loaders makes them suitable for the transportation of heavy plant, equipment and machinery from 20 to 80 tonnes.

MAC Stepframe Low Loaders are designed with the operator in mind with a combination of strength and low unladen weight. The position of the trailers tying points also means they are safer and easier for operators to use than many alternatives currently being offered.

All MAC trailers are built with brand new parts and meet all EU and exporting regulations.

2 Axle Machinery Carriers

The MAC 2 Axle Machinery Carrier is manufactured with a carrying capacity of 33 tonnes gross. This trailer is designed to have a low unladen weight and built at specific overall length so that it can be maneuvered in difficult spaces.

3 Axle Machinery Carriers

Like the 2 axle trailer, the MAC 3 Axle Machinery Carrier is designed to have a low unladen weight and is ideal for customers wanting to move multiple pieces of plant and equipment grossing to 39 tonnes.

CAT1 3 Axle Stepframes

The MAC 3 Axle Stepframe Low Loader has a carrying capacity of 44 tonnes gross. As one of the company's most successful and longest establish product lines, the 3 Axle Stepframe guarantees any customer efficient completion of tasks without difficulty or concern. The trailer has an extended list of options to assist in loading and maneuverability and is available on all popular brands of axle.

CAT2 3 Axle Stepframes

The MAC CAT2 3 Axle Stepframe Low Loader has a carrying capacity of 58 tonnes gross. Similar in dimensions to the CAT1, the CAT2 has increased carrying capacity due to the larger axles and heavier construction of the side chimes, cross-members, floor and chassis.

4 Axle Stepframes

MAC 4 Axle Stepframe Low Loaders are manufactured using only the highest quality materials to provide users with a carrying capacity of 70 tonnes gross. This trailer again has increased carrying capacity due to the larger axles and heavier construction of the side chimes, cross-members, floor and chassis. With four axles it comes standard with two self tracking rear axles and a front lift axle to increase maneuverability.

5 Axle Stepframes

With a carrying capacity of 82 tonnes gross, the MAC 5 Axle Stepframe is manufactured using the strongest of axles from the popular axle manufactures. The build quality is strong due to the heavier construction of the side chimes, cross-members, floor and chassis. With five axles it comes standard with self tracking rear axles and a front lift axle to increase maneuverability.

Extending Stepframes

MAC Extendable Stepframes are manufactured in 3, 4 and 5 axle configurations with carrying capacities of 44 tonnes gross and 70 tonnes gross respectively. These trailers extend from 13300mm to 19300mm and are manufactured using a welded box section chassis and high tensile steel for extra strength and ease of operation. Both models are complete with self tracking axles for ease of maneuverability.

Dolly Stepframes & Link Trailers

To increase carrying capacity McCauley Trailers in-house design team have worked with customers and government officials across many countries to manufacture link trailers and dolly's to work in co-operation with each other and to maximise the use of the Stepframe trailer.

Custom Builds

The extensive range of Stepframe Low Loaders we have is just part of what we offer our customers. With our in-house design team we specialise in the customisation of trailers to suit individual requirement and work closely with our customers to supply the exact trailer required.
